

DI NOKENG LOFTS

NUUSBRIEF/NEWSLETTER DECEMBER 2016

Aan al ons ondersteuners, en mede duiweboere, mag julle almal 'n Geseënde Kersfees hê en alles wat mooi is vir die Nuwe Jaar.

- 1. Dit gaan baie goed met ons 2017 inname, ons het met hierdie skrywe alreeds 211 duiwe ingekry dit is 43% meer as in dieselfde tyd 2015.*
- 2. Die duiwe is in goeie kondisie, almal wat uit is onder die net vlieg al om die hok en ons het sover slegs twee duiwe om die hok verloor. Ons het alreeds die eenaars laat weet om hulle te vervang.*
- 3. Namens almal en onself hoop ons vir 'n baie goeie 2017 seisoen. Onthou ons hok is oop vir innames toto einde Maart 2017.*

Duiwevriende ek wil almal van julle weereens vriendelik versoek om as dit moontlik is asb. die volgende te doen voor julle, julle kosbare jong duiwe na ons hok bring.

- 1. Spuit hulle vir Paramyxo as julle hulle speen en gee 'n kankerpil.*
- 2. Spuit hulle 14 dae later nog 'n keer.*
- 3. Wag nou nog ± 11 dae voor julle hulle bring, dan kan ek hulle by aankoms weer spuit.*

Ek het met Dr. Rob Conradie gesels en hy het my verseker dat Paramyxo hierdie jaar nog erger en wyd verspreid voorkom. Dit is en word 'n al groter probleem.

Ek verseker julle dit is in julle eie belang dat ek hierdie versoek rig. Gee jou duiwe die beste moontlike kans om jou trots te maak.

As die duif alreeds Paramyxo onderlede het, gaan dit niks help as ek hom spuit wanneer hy by my aankom nie, ook sal hy ander aansteek wat nog nie die nodige imuniteit opgebou het nie. Ongelukkig sal so 'n duif alreeds ander aansteek nog voordat hy enige tekens van die siekte toon.

So asb. help ons, help ander en help jouself dit is in jou eie belang.

To all our supporters and all pigeon fanciers may you have a Blessed Christmas and a prosperous New Year.

1. *It is going very well with our 2017 intake, to date we have already received 211 birds which is a 43% increase for the same period in 2015.*
2. *The pigeons are in good condition, the birds that have left the net are flying around the loft and thus far only 2 birds have become lost, the owners have been notified to replace their birds.*
3. *On behalf of everyone and ourselves we are hoping for a very successful 2017 season, thank you for your support, remember the loft is open for intake until the end of March 2017.*

Paramyxo remains a serious problem; therefore it is of utmost importance to vaccinate your young birds before despatching them to our loft.

1. *Vaccinate for Paramyxo upon weaning before they lose their natural immunity; a cancer tablet at this time will also insure that trichomonosis does not get a foothold.*
2. *Administer a follow-up vaccination 14 days later.*
3. *Only despatch your birds to our loft +/- 11 days later. Upon arrival I will vaccinate them once again.*

According to Dr Rob Conradie, Paramyxo was a big problem in 2016 and it seems to be even worse this season. Therefore it is in your own and everyone else's interest to send healthy vaccinated pigeons to our loft. It will be beneficial to us all, to prevent infecting other birds who have not yet developed the necessary immunity. This can occur from an infected bird before it shows any symptoms of the disease.

Thereby diminishing everyones chances.

Duiwe groete/Pigeon greetings.

Banie & Meisie
